

Claim Listing

1. (Original) A magnetorheological device comprising:
 - a generally cylindrically shaped housing having cylindrical walls and a divider within said housing;
 - said housing includes an integral end portion and an end plate removably attached to said cylindrically shaped housing;
 - a rotary impeller having two paddles mounted within said housing;
 - said rotary impeller sealingly engaging said divider;
 - said paddles in combination with said cylindrical walls, said divider, said integral end portion of said housing, and said end plate of said housing form a first chamber and a second chamber;
 - a magnetorheological fluid residing in said chambers;
 - a passageway interconnecting said first and second chambers; and,
 - a coil surrounding a portion of said passageway enabling the viscosity of the magnetorheological fluid to be varied.
2. (Original) A magnetorheological device as claimed in claim 1 wherein said coil is a direct current coil.
3. (Original) A magnetorheological device as claimed in claim 1 wherein said coil is an alternating current coil.
4. (Withdrawn) A magnetorheological device as claimed in claim 2 further

comprising a permanent magnet mounted in proximity to said passageway.

5. (Withdrawn) A magnetorheological device as claimed in claim 3 further comprising a permanent magnet mounted in proximity to said passageway.

6. (Original) A magnetorheological device as claimed in claim 1 wherein said passageway is exterior to said housing.

7. (Original) A magnetorheological device as claimed in claim 1 wherein said passageway is interior to said housing.

8. (Original) A magnetorheological device as claimed in claim 1 further comprising a first edge seal extending from said first paddle and a second edge seal extending from said second paddle.

9. (Original) A magnetorheological device as claimed in claim 1 wherein said housing includes a third inner seal affixed to said integral end portion and a fourth seal affixed to said end plate.

10. (Original) A magnetorheological device as claimed in claim 6 wherein said passageway includes a tortuous path.

11. (Original) A magnetorheological device as claimed in claim 1 further comprising a first edge seal extending from said first paddle, a second edge seal extending from said second paddle, a third inner seal affixed to said integral end portion and a fourth seal affixed to said end plate.

12. (canceled)

13. (canceled)

14. (canceled)

15. (Previously amended) A torsional magnetorheological device comprising:

 a housing having a divider extending inwardly from said housing;

 a hub having a first impeller and a second impeller rotatably mounted within said housing;

 said first impeller and said second impeller straddling said divider;

 a first chamber formed by said first impeller and said divider and a second chamber formed by said second impeller and said divider;

 a passageway interconnecting said first and second chambers;

 magnetorheological fluid in said chambers and said passageway;

 a magnetic field generated by a coil surrounding said passageway such that an increase in said field increases the viscosity of the magnetorheological fluid;

 said magnetorheological fluid in said passageway being solidified upon application of a sufficient magnetic field thereto forming a plug in said passageway;

 said hub and impellers rotatably pushing said magnetorheological fluid against said divider and said plug such that said magnetorheological fluid is in compression.
